

# Sonar Super-vision™

Prevention is better than cure

## What is Super-vision?

Sonar Super-vision™ is a **best practice** implementation and **management framework** to put your data to work and help you gain the most from Sonar.

## How does it work?

Each assessment is categorized by **key focus area** (resolution, prevention, planning, reporting), **use case** (capacity, performance, configuration), and **ITSM role group** to guide effective information flow and distribution. A recommended baseline schedule delivers a managed plan, while analytics can be accessed on-demand as needed.

## Sonar for VMware vSphere
